## ENVIRONMENT & SUSTAINABILITY POLICY

### Our Environmental Vision:

At Boom Logistics, we are committed to efficiently and effectively managing the environmental impact of our operations and fostering a culture of sustainability. Our goal is to integrate environmental responsibility into every aspect of our business, ensuring we contribute to the preservation of natural resources and the long-term viability of the environment while supporting the growth and expansion of our operations.

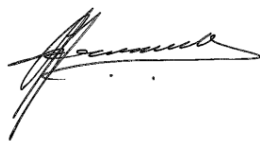

### We believe:

- Environmental stewardship is a responsibility shared by all at Boom Logistics.
- Efficiently and effectively managing our environmental footprint is essential for the sustainability of our business and the communities in which we operate.
- Compliance with environmental laws is a baseline; we strive for continuous improvement through efficient operations and responsible resource use.
- Growing our business responsibly requires balancing operational outcomes with environmental considerations.

### To achieve this we will:

- *Sustainable Use:* Implement strategies to optimise resource consumption and waste generation across our operations. We will promote reducing, reusing, and recycling materials wherever possible.
- *Energy and Carbon:* Focus on improving the operational efficiency of our assets, and optimising energy usage as we expand our operations.
- *Pollution and Waste:* Prevent pollution by responsibly managing hazardous substances, controlling emissions, and implementing robust waste management systems across all sites.
- *Water Conservation:* Implement water-saving measures, particularly in areas where water resources are limited, ensuring responsible use and management.
- *Compliance and Continuous Improvement:* Ensure compliance with all relevant environmental laws and regulations as a minimum. Set and review environmental objectives annually, focusing on continuous improvement in resource efficiency, energy intensity, and waste reduction.
- *Sustainable Procurement:* Engage with suppliers and contractors who share our commitment to sustainability
- *Monitoring and Reporting:* Monitor, audit, and report on our environmental performance, focusing on resource efficiency and energy intensity metrics. These insights will guide decision-making and ensure integrity in our sustainability measures.

This policy was developed in consultation with management, supervisors and employees and will be reviewed again in September 2026.
